

Latest JAM tweaks: what should feel different

- Explicit principles guide how we lead our teams.
- Leaders lead. Ryan organizes and drives the program; senior ICs facilitate recurring functional meetings; ICs own the work toward outcomes.
- Each function has an established focus for every two-week segment of Jam.
- Each function has one weekly meeting to check in with the team and advance the current focus. No other functional meetings recur.
- Cooldown extends to Product and Design at different points in Jam.

Principles

Focus

Crush it at what matters most. Drop the rest.

Autonomy

Set expectations, build alignment, and trust the team.

Growth

Inspect the work and lean in where needed.

Ownership

Chris, Kai, and Lee - Lead the Build Org functional teams.

Ryan - Organize and drive the program.

Senior ICs - Facilitate recurring functional meetings.

ICs - Own the work to achieve agreed-upon outcomes.

Well yeah, but...

...this is missing important work (Focus).

Definitely. Is it truly critical for success? We'll add what matters most. Help me free you up by driving towards those outcomes.

...we solve things as a team (Autonomy).

Do we have time to be individual contributors on this work? Can we inspect the work and support strategically 1:1?

...I need to make sure we get it right (Growth).

Is the work 'mission critical'? Can we trust the team? Can we mentor strategically to facilitate growth over time?
